circuit protection**

*Powering Business Worldwide*

We make what matters work.\*

At Eaton, we believe that power is a fundamental part of just about everything people do. That's why we're dedicated to helping our customers find new ways to manage electrical, hydraulic and mechanical power more efficiently, safely and sustainably. To improve people's lives, the communities where we live and work, and the planet our future generations depend upon. Because this is what really matters. And we're here to make sure it works.

## Introduction

Eaton's Bussmann® series NH fuse links use the latest technology to provide class leading fuse link performance and reliable indication. With a unique patented dual indicator design capable of operating a microswitch for remote fuse indication, Eaton provides one of the most reliable solutions available.

The range is fully compliant with IEC 60269-1 and 2 standards, with VDE 0636-2 third party approval and complies with the dimensional requirements of DIN 43620 for ease of use.

In order to help select the correct product for an application, Eaton provides the following application notes.

## NH Fuse links' selection criteria

### Selecting the correct product

Before making a fuse link selection the following information should be known about the system or circuit to be protected.

### Type of application (cable protection/motor protection)

For general applications or cable protection, the standard gG (general purpose) NH fuse link should be considered. For Motor protection applications, the aM (motor protection) NH fuse link should be considered. Motor Protection (aM) fuse links have partial range breaking ability and cannot clear low overload faults. They should only be applied to circuits also protected by a motor protection relay or where only high short-circuit faults could occur.

**Note:** Please note that misapplication of a fuse link can be problematical, consult Eaton if there is any doubt over fuse link selection.

### System voltage

Eaton's Bussmann series NH fuse links are available in three voltage ratings, 400 V, 500 V and 690 V. These are maximum voltage ratings and should not be used where the nominal system voltage could exceed the fuse link's maximum rating.

### Full load current

In accordance with IEC standards, Eaton's Bussmann series NH fuse links are tested to carry full load current. The current of a fuse link should be equal or greater than the operational current of the circuit and equal or smaller than the continuous current carrying capacity of the conductor.

The standard gG (general purpose) NH fuse link with a conventional fusing current of 1.6 times current will give assured cable protection against the effects of overcurrents.

### Non-fault overload currents (motor inrush currents etc)

To prevent nuisance operation of the fuse link, the fuse link rating selected for the application should take into account any non-fault overload currents. Please refer to the time-current curves in the catalogue.

### Possible fault conditions and maximum short-circuit current

This information is essential in order to select the fuse link that would provide the best possible protection under all fault conditions. Eaton's Bussmann series NH fuse links have a maximum breaking capacity of 120 kA

and should never be used on a system where the maximum short-circuit current exceeds this level. Please refer to the time-current curves in the catalogue.

### Time-current curves

The time-current curve is probably the most useful piece of all fuse link data available. It allows you to determine how quickly the fuse link will operate under fault conditions and which fuse link will not operate under non-fault overload currents.

To use the curve simply plot the prospective Root Mean Square (RMS) fault current along the X axis and draw a line vertically upwards from this point. Where this point intersects the fuse curve line, plot a line across to the Y axis for the relevant rating. The Y axis shows the nominal operating time for the fuse in seconds. Hence, it shows how quickly the fuse link will operate under different fault currents.

The graph can be used to check if a fuse link can withstand an overload condition that is not considered to be a fault such as a direct-on-line (DOL) motor start. For example, if a motor starts and the inrush current is six times the full load current for 10 seconds, the exact point can be plotted onto the time-current curve.

Any fuse link line lying to the right of this point will withstand the motor start current (allowing for a +/-10% tolerance on each fuse link curve). If the fuse link curve falls to the left of this point, then the fuse link will not withstand the motor start current and will inadvertently operate when the motor is started.

In summary, the rule for time-current curves is that any point on or to the right of a fuse link curve would indicate the fuse link has operated in the given time. Any point to the left of the curve would indicate the fuse link has not operated.

# 1.1

## NH Fuse links overview

### NH Fuse links' selection criteria

#### 1.1

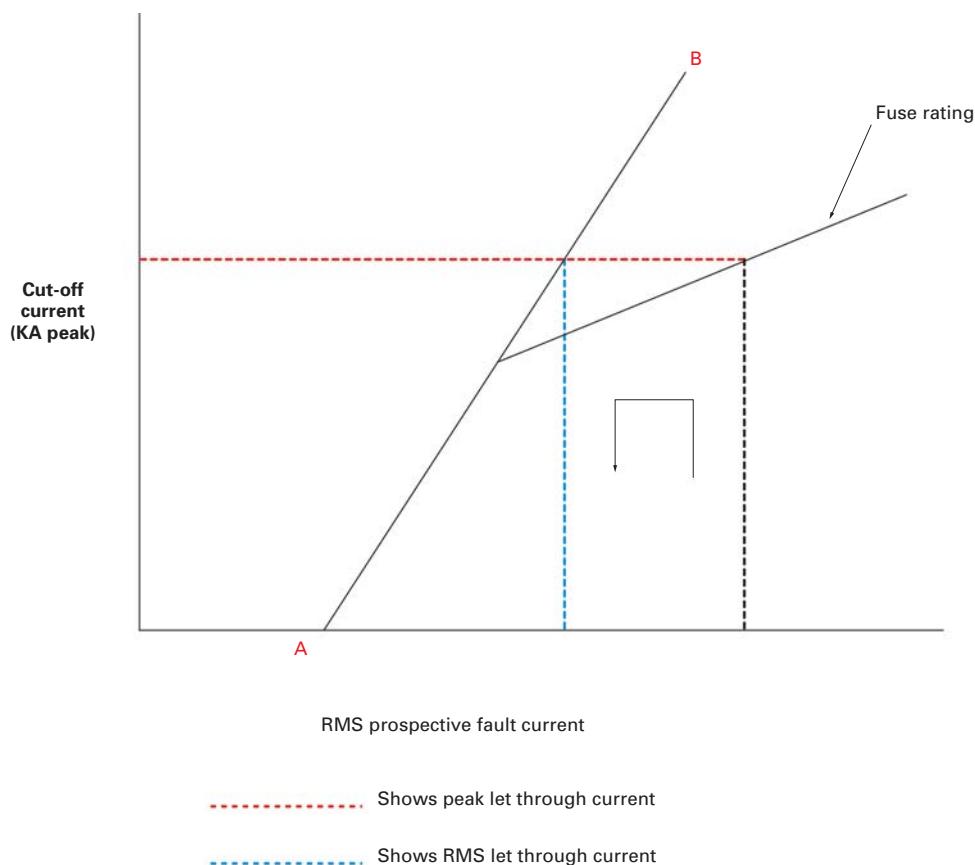

##### Cut-off curves

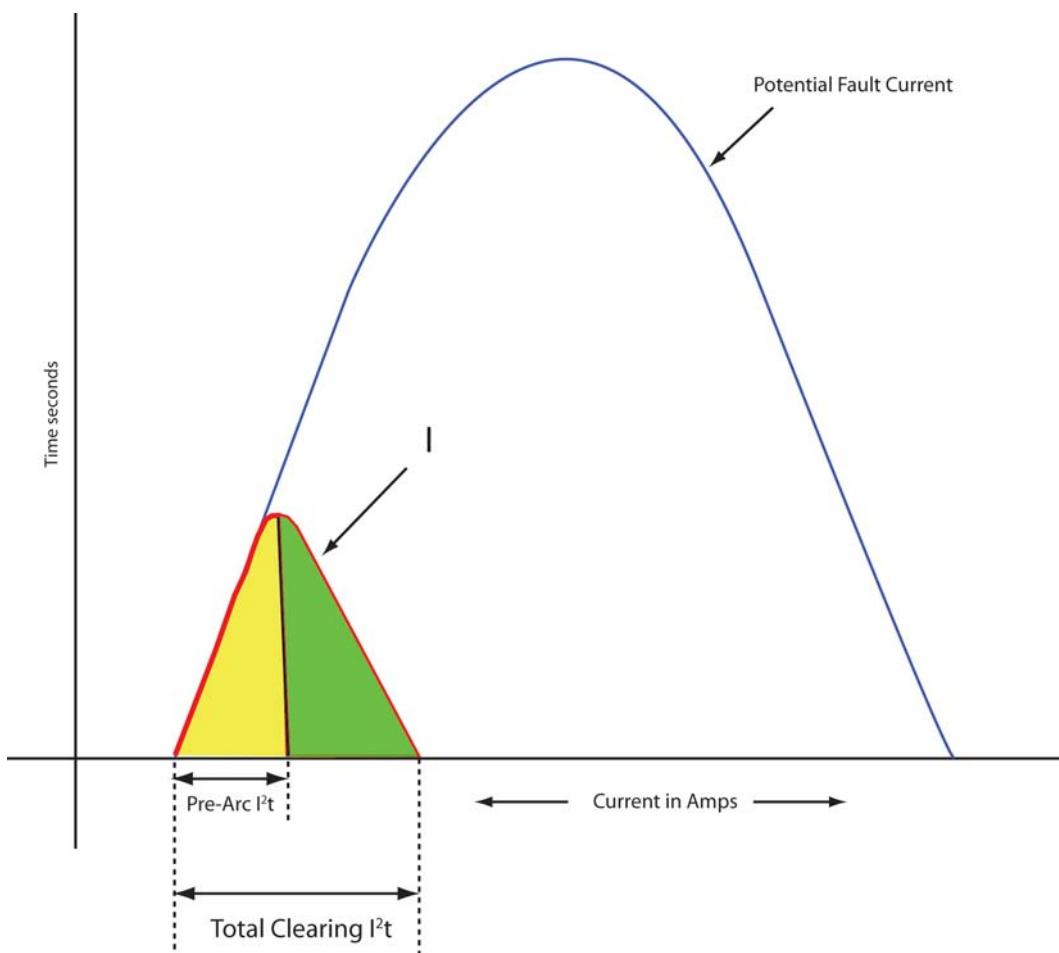

The graph consists of an A-B line running diagonally from bottom left to top right, see drawing below. This is known as the non current-limiting line. Branching from this A-B line you can see each individual fuse link rating line running diagonally left to right. To read the graph, plot the RMS prospective fault

current along the X axis. If this point only intersects the A-B line then the prospective fault current is too low to benefit from the current-limiting effect of the fuse link. However, if this point intersects the relevant fuse link line, plot a line across to the Y axis. This point on the Y axis shows the peak asymmetrical let-through

current the fuse link will allow to pass before operating. The peak asymmetrical let-through current is the absolute worst case peak current the fuse link will allow to pass through, taking into account the DC offset seen under short-circuit conditions and low power factor. The RMS let-through current is read from the graph using

the same procedure above. Instead of plotting the point of intersection with the fuse link current-limiting line over to the Y axis, it should only be plotted as far as the A-B line. At this point, a line can be drawn back down to the X axis to show a RMS symmetrical value of let-through current. This is known as the "up, over and down method".

## $I^2t$ values

$I^2t$  values are measured at the time of testing the fuse link at their rated breaking capacity and voltage.  $I^2t$  is effectively the amount of heating energy the fuse link will allow to pass during fault clearing at high short-circuit faults.  $I^2t$  values relevant for short-circuit faults cannot be calculated from the time-current or cut-off curves.

The published  $I^2t$  figures always show two values, pre-arching/total clearing and are representative of the area under the first half cycle of the fault current.

- The pre-arching value is the area under the first half cycle of fault current showing on the graph in yellow to the point just before an arc occurs within the fuse link. This is due to the element material being vapourised by the very high short-circuit current.

The total clearing  $I^2t$  is the yellow and green area under the first half cycle from the start of the short-circuit current flow to the point where the fuse link has become an insulator, completely isolating the flow of current.

The diagram here shows a representation of  $I^2t$  during a half cycle of fault current.

$I^2t$  values give a good representation of the speed of operation of a fuse link. A small  $I^2t$  value would indicate a very fast-acting fuse link whereas a large  $I^2t$  value would indicate a fairly slow operating fuse link. In all cases the total clearing  $I^2t$  value of the fuse link must be smaller than the  $I^2t$  value of the device to be protected in order for the fuse link to provide adequate protection against short-circuit faults. For fuse link discrimination (see definition of discrimination below) in distribution systems, the

total clearing  $I^2t$  value of the fuse link downstream should be less than the pre-arching  $I^2t$  value of the fuse link upstream. This ensures the smaller fuse link, in the system operates well before the larger upstream fuse link.

## NH discrimination

Eaton's Bussmann series NH fuse links are easy to use on distribution networks where discrimination between large and small fuse links are required. This can be achieved by applying a discrimination factor of 1 to 1.6 without the need to check the fuse link data. For example, by using a 100 A fuse link downstream from the main 160A fuse link, in the event of a fault condition, the smaller 100A fuse link is sure to operate before the 160A fuse link, ensuring discrimination.

## DC applications

Eaton's Bussmann series NH fuse links can be used on DC applications. In all cases the fuse links can be used at half of their AC rating with a time constant of no more than 10mS. The time constant is the rate of rise of fault current and should be as close to a 50Hz AC half cycle as possible.

## Power loss

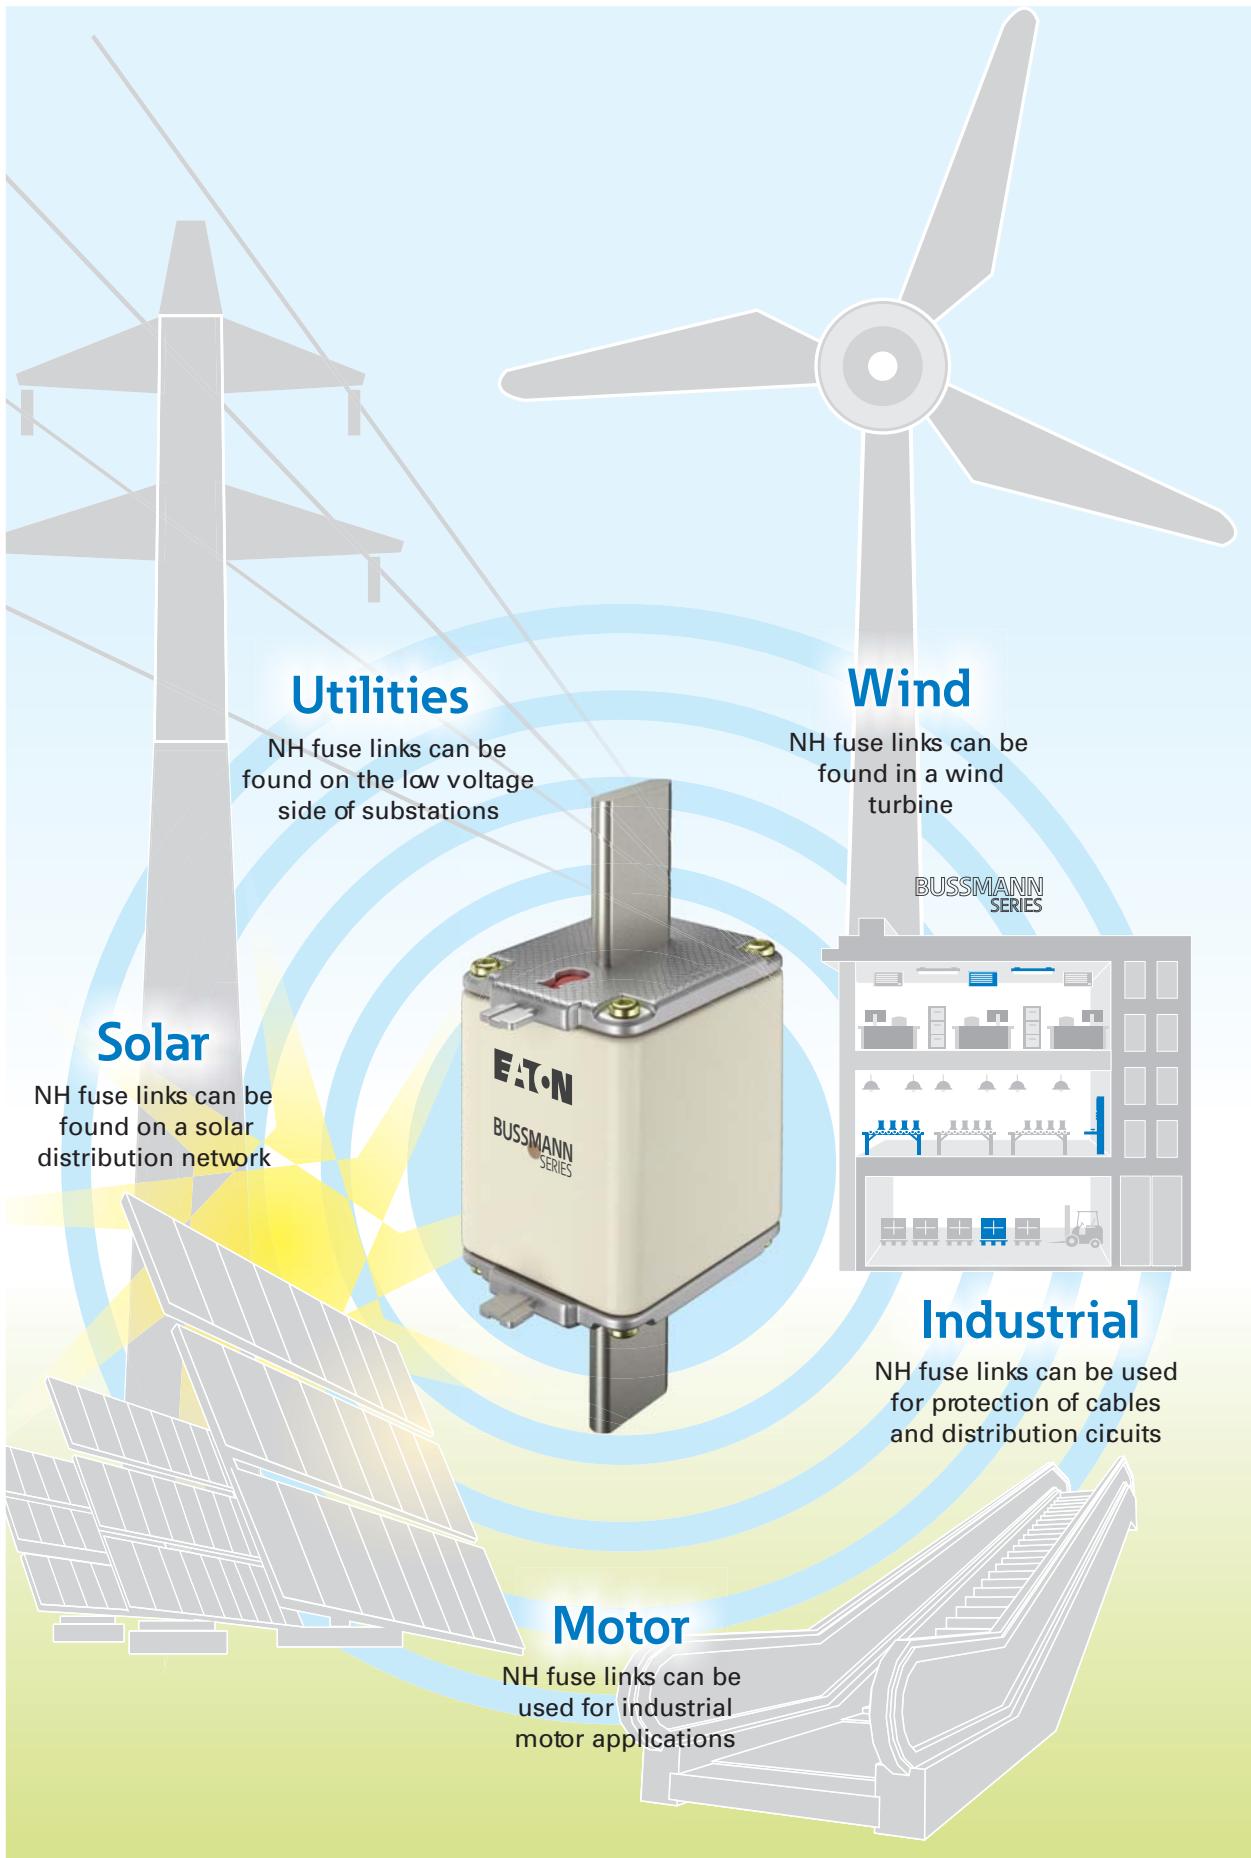

Every effort is made to ensure the power loss of the fuse link is kept to a minimum. Eaton provides fuse links with some of the lowest power losses in the industry. Power loss of the fuse link is given off as heat and this should be taken into account when fitting fuse links into unventilated areas. It is preferable that a fuse link has good airflow around the body of the fuse link to ensure cool running and prevent nuisance operation of the fuse link due to thermal stresses.

## NH Fuse links overview

NH Fuse links applications

### 1.1 NH Fuse links applications

## NH Dual indicator system from Eaton

- High breaking capacity
- Insulated tag variants option available
- 400, 500 and 690 V a.c.
- IEC 60269-1 and 2, DIN 43620, VDE 0636-2, CE Mark.
- Dual indication

Metal Gripping Lugs

Insulated Metal Gripping Lugs

## Features of the NH DIN range

### Dual indicator system

Eaton's patented dual indicator system provides clear indication, ensuring extremely reliable local and remote\* signalling, decreasing fuse link replacement time and costs.

\*with the use of an optional microswitch accessory

### Low power loss

Eaton's Bussmann series "low watts loss" fuse links reduce overall operating costs and carbon footprint through lower energy consumption and heat transfer to equipment. To find out how much you can save, please contact our technical applications department: buletechnical@eaton.com.

### Globally compliant

Eaton's Bussmann series NH fuse links are tested and comply with IEC 60269-1 and 2, DIN 43620, VDE, CE, CCC (China), RoHS and can be recycled, ensuring global acceptance.

### Lead and cadmium free

Eaton is the world's first true manufacturer of a complete range of Lead and Cadmium free NH fuse links. Negating any legislation concerns regarding the amount of hazardous materials permissible within the fuse links.

Cd/Pb-free

### Recycling

Eaton is dedicated to produce recyclable products and is a member of an industry recognised recycling scheme. The "HRC" symbol on Eaton's Bussmann series NH fuse links define the product suitable for recycling, limiting disposal cost.

50NHFF000BI-400 with  
insulated metal gripping lugs

**Class of operation**

- gFF

**Standards / approvals**

- IEC 60269 part 1
- Dimensionally in accordance to IEC 60269 part 2 and DIN 43620 part 1 and 3

**Technical data**

- Sizes: 000, 00, 1, 02, 2 and 3
- Voltage: 400 V a.c.
- Current: 2 to 630 A
- Rated breaking capacity: 120 kA, 80 kA for NH00 80 A and 160 A
- Rated frequency: 50Hz

**Optional microswitch**

NH Fuse body size	Suitable microswitch
Size 000	170H0236
Size 00	170H0236
Size 1	170H0236
Size 02	BVL50
Size 2	170H0235 or 170H0236
Size 3	170H0235

**Compatible fuse holders**

Description	Type	Data sheet number
Fuse bases 1-pole	DIN-Rail mounting SD-D	10163
	Screw mounting SD-S	10163
Fuse bases 3-pole	DIN-Rail mounting TD-D	10163
Fuse bases accessories	IP20, Shroud and phase barriers kits	10163
Fuse rails	Vertical - EBF	10240
Fuse switch disconnectors	Vertical - EBV	10275
	Horizontal - EBH Size 000	10292
	Horizontal - EBH Size 00 to 4	10293

**Environmental**

- Recyclable
- RoHS compliant
- Lead and cadmium free.

**Packaging**

- All fuse links are packed in threes.

**Features:**

- Reliable dual indicator system
- Ideal for utility network protection, especially in large rural areas
- Low temperature rise

A square bodied range of industrial fuse links for a wide variety of applications.

**Catalogue numbers structure**

- (amp)NHG(size)B-400  
e.g. 100NHG02B-400  
with conducting metal gripping lugs
- (amp)NHG(size)BI-400  
e.g. 100NHG000BI-400  
with insulated metal gripping lugs

**Class of operation**

- gL/gG.

**Standards / approvals**

- IEC 60269-1 and 2, VDE 0636, DIN 43620 and CE.

**Technical data**

- Sizes 000 to 3
- Voltage: 400 V a.c.
- Current: 2 to 630 A
- Rated breaking capacity: 120 kA AC
- Rated frequency: 50Hz
- Operating frequency: 45-62Hz.

**Optional microswitch**

NH Fuse body size	Suitable microswitch
Size 000	170H0236
Size 00	170H0236
Size 01	170H0235
Size 1	170H0236
Size 02	BVL50
Size 2	170H0235 or 170H0236
Size 03	BVL50
Size 3	170H0235

**Compatible fuse holders**

Description	Type	Data sheet number
Fuse bases 1-pole	DIN-Rail mounting SD-D	10163
	Screw mounting SD-S	10163
Fuse bases 3-pole	DIN-Rail mounting TD-D	10163
Fuse bases accessories	IP20, Shroud and phase barriers kits	10163
Fuse rails	Vertical - EBF	10240
Fuse switch disconnectors	Vertical - EBV	10275
	Horizontal - EBH Size 000	10292
	Horizontal - EBH Size 00 to 4	10293

**Environmental**

- Recyclable
- RoHS compliant
- Lead and cadmium free.

**Packaging**

- All fuse links are packed in threes.

**Features:**

- Reliable dual indicator system
- Low temperature rise
- Globally compliant.

\* Size 4 NH is a single indication fuse with slotted end tags

\*\* I<sub>1</sub> is the maximum breaking capacity test at voltage according to IEC 60269-1 and 2 requirements

**Description**

A square bodied range of industrial fuse links for a wide variety of applications.

**Catalogue numbers structure**

- (amp)NHG(size)B-690 e.g. 2NHG000B-690.

**Class of operation**

- gL/gG.

**Standards / approvals**

- IEC 60269-1 and 2, DIN 43620 Part 1 and 3.

**Technical data**

- Sizes 000 to 4
- Voltage: 690 V a.c.
- Current: 2 to 800 A
- Rated breaking capacity: 120 kA
- Operating frequency: 45-62Hz.

1.5

**Optional microswitch**

NH Fuse body size	Suitable microswitch
Size 000	170H0236
Size 00	170H0236
Size 1	170H0236
Size 2	170H0235 or 170H0236
Size 3	170H0235
Size 4	Not available

**Compatible fuse holders**

Description	Type	Data sheet number
Fuse bases 1-pole	DIN-Rail mounting SD-D	10163
	Screw mounting SD-S	10163
Fuse bases 3-pole	DIN-Rail mounting TD-D	10163
Fuse bases accessories	IP20, Shroud and phase barriers kits	10163
Fuse rails	Vertical - EBF	10240
Fuse switch disconnectors	Vertical - EBV	10275
	Horizontal - EBH Size 000	10292
	Horizontal - EBH Size 00 to 4	10293

**Environmental**

- Recyclable
- RoHS compliant
- Lead and cadmium free for sizes 000 to 4 (2 to 1250A).

**Packaging**

- Sizes 000 to 3: 3 per carton
- Size 4: 1 per carton

**Features:**

- Reliable dual indicator system (size 4 single indication only)
- Low temperature rise
- Globally compliant
- UL on limited ratings.

**Description**

A range of class aM square bodied industrial fuse links for a wide variety of motor protection applications.

**Catalogue Numbers structure**

- 500 Volts: (amp)NHM(size)B
- 690 Volts: (amp)NHM(size)B-690.

**Class of operation**

- aM.

**Standards / approvals**

- IEC 60269-1 and 2, DIN 43620 Part 1 and 3.

**Technical data**

- Sizes 000 to 3
- Voltage: 500 and 690 V a.c.
- Current: 6 to 500 A
- Rated breaking capacity: 120 kA
- Operating frequency: 45-62Hz.

1.6

**Optional microswitch**

NH Fuse body size	Suitable microswitch
Size 000	170H0236
Size 00	170H0236
Size 1	170H0236
Size 2	170H0235 or 170H0236
Size 3	170H0235

**Compatible fuse holders**

Description	Type
Fuse bases 1-pole	SD(size)-D DIN-Rail mounted SD(size)-S: Screw mounting
Fuse bases 3-pole	TD(size)-D, DIN-Rail mounted
Fuse bases accessories:	IP20, shroud and phase barrier kits
Fuse rails	vertical: EBF series
Fuse switch disconnectors	vertical: EBV series horizontal: EBH series

**Environmental**

- Recyclable
- RoHS compliant
- Lead and cadmium free.

**Packaging**

- All fuse links are packed in threes.

**Features:**

- Reliable dual indicator system (except size 2, 315 and 355 A which are single indication)
- Low watts loss
- Metal gripping lugs.

## NH Fuse bases and accessories - SD and TD series

**Description**

NH fuse bases with thermoplastic bodies, DIN rail and/or screw mounting (size 4 screw mounting only). Range of accessories including phase barriers, IP20 finger-safe protection kits and neutral links available.

Microswitch also available for remote signaling of fuse link operation.

**Catalogue numbers structure**

- SD(size)-D, SD(size)-S: 1-pole
- TD(size)-D, TD(size)-DI: 3-pole.

**Standards / approvals**

- IEC 60269-1 and 2, VDE 0636-1 and 2.

**Technical data**

- Voltage: 690 V a.c.
- Current: 160 to 1600A
- Rated for fuse links with breaking capacity: 120 kA

**Compatible fuse links**

- NH 400, 500 and 690 V a.c. NH gG and aM fuse links

**Packaging**

- 1-pole: 3, SD4 and 3-pole: 1
- Packaging 100% recyclable

**Features**

- Complies with IEC 60269-1 and 2 fuse system A (NH base), manufacturers type test certificates of compliance available.
- 3-pole integral NH00 base available with reduced width.
- Clip-in phase barriers, terminal shrouds and fuse covers available.
- Vibration tested to IEC 60068-2-6 for marine use.

## 1.8

## NH Fuse rails - vertical - EBF series

**Description**

Eaton's Bussmann series NH Fuse rails are specifically designed to be used with NH Fuse links. All energized metal parts are fully protected against accidental contact. They are intended for direct installation on horizontal or vertical busbar systems.

**Functionality**

- Designed for installation onto 185 mm busbar systems, sizes 00,1,2 and 3
- Fuse rail width: size 00 - 50 mm, size 2,3 - 100 mm
- IP20 Touch protection
- EBF 00/100 mm fuse rails are designed for installation onto 100 mm busbar systems. Installation onto 185 mm busbar system is possible by using an adaptor

**Catalogue numbers structure**

- EBF

**Standards/approvals**

- IEC 60269-1 and CE.

**Technical data**

- Voltage: 690 V a.c.
- Current:
  - 160 A size 00
  - 400 A size 2
  - 630 A size 3

**Compatible fuse links**

- NH 400, 500 and 690 V NH gG and aM fuse links

**Operating conditions**

- Suitable for installation in environments free of any dust, explosive or aggressive gases.
- Altitude up to 2000 metre above sea level
- Can be used in outdoor environments if they are installed in IP34 cabinets
- Relative air humidity should not be higher than 50% temperature of +40°C
- Ambient temperature from -25°C to +55°C

**Features**

- Possible installation of various earthing devices
- Various options for cable terminations
- Wide range of accessories
- Touch protection IP20 with fuse shrouds

**Packaging**

- 1 per carton.

## NH Fuse switch disconnectors - vertical - EBV series

**Description**

Eaton's Bussmann series NH Vertical fuse switch disconnectors are specifically designed to be used with NH fuse links. All energized metal parts are fully protected against accidental contact. They are suitable for direct installation on horizontal or vertical busbar systems. The three poles can be switched independently or simultaneously depending upon the version. These are manually operated switches and the making and breaking is dependent on the speed of the operation. The EBV series NH gear are provided complete with the clamps(i.e. screws/V-terminals/2V-terminals) and shrouds for cable termination.

**Functionality**

- Designed for installation onto 100 mm or 185 mm busbar system
- Making and breaking operation should be done with determined movement
- Parallel moving, double contact system
- Suitable for top cable termination connection

**Catalogue numbers structure**

- EBV (see table below)

**Standards/approvals**

- IEC 60947-1 and 3, EN 60947-1 and 3

**Technical data**

- Voltage: 690 V a.c.
- Current: 160 to 910 A
- Utilisation category:
  - AC21B 690 V a.c. Size 3
  - AC22B 500 V a.c. Sizes 00 to 3
  - AC23B 400 V a.c. Size 00 to 3

**Compatible fuse links**

- NH 400, 500 and 690 V gG and aM fuse links

**Operating conditions**

- Suitable for installation in environments free of any dust, explosive or aggressive gases
- Altitude up to 2000 metre above sea level
- Can be used in outdoor environments if they are installed in IP34 cabinets
- Relative air humidity should not be higher than 50% temperature of +40°C
- Ambient temperature from -25°C to +55°C

**Features**

- Touch protection IP 30 from the front
- Top/bottom cable termination possibility
- Test holes provided on the cover to measure the voltage across the link
- Various options for cable terminations
- Wide range of accessories

**Packaging**

- 1 per carton

**NH Fuse switch disconnectors - horizontal - EBH000****Description**

Eaton's Bussmann series EBH000 NH Horizontal fuse switch disconnectors are specifically designed to be used with size 000 NH Fuse links up to 160 A. They have compact dimensions, all energized metal parts are fully protected against accidental contact. These are manually operated switches and the making and breaking is dependent on the speed of the operation.

**Functionality**

- Designed for installation onto mounting plates, 60 mm or 100 mm busbar systems
- Making and breaking operation should be done with determined movement
- Parallel moving, double contact system
- Suitable for top or bottom cable terminal connection

**Features**

- Touch for IP 30 from the front
- Top/bottom cable termination possibility
- Compact dimensions
- Test holes provided on the cover to measure the voltage across the link
- Various options for cable terminations
- Wide range of accessories

**Catalogue numbers structure**

- EBH000 O on mounting plates
- EBH000 1 on 60 mm busbar systems

**Standards/approvals**

- IEC 60947-1 and 3, EN 60947-1 and 3

**Technical data**

- Voltage: 690 V a.c.
- Current: 160 A
- Utilisation category:
  - AC21B
  - AC22B
  - AC23B
  - DC21B

**Compatible fuse links**

- Size 000 NH Fuse links up to 160 A

**Mounting options**

- On mounting plates: EBH000 O
- On to 60 mm busbar systems: EBH000 1

**Operating conditions**

- Suitable for installation in environments free of any dust, explosive or aggressive gases
- Altitude up to 2000 metres above sea level
- Can be used in outdoor environments if they are installed in IP34 cabinets
- Relative air humidity should not be higher than 50% temperature of +40°C
- Ambient temperature from -25°C to +55°C

**Packaging**

- 1 per carton.

**Bottom cable terminal**

**Top cable terminal**

## 1.8

**Description**

Eatons' Bussmann series NH horizontal fuse switch disconnectors are specifically designed to be used with NH fuse links. All energised metal parts are fully protected against accidental contact. These are manually operated switches and the making and breaking is dependent on the speed of the operation. The EBV series NH gear are provided complete with the clamps (i.e. screws/V-terminals/2V-terminals) and cable for shrouds for cable termination.

**Functionality**

- Designed for installation onto mounting plates, 60 mm or 100 mm busbar systems
- Making and breaking operation should be done with determined movement
- Parallel moving, double contact system
- Suitable for top or bottom cable terminal connection

**Features**

- Touch for IP 30 from the front
- Top/bottom cable termination possibility
- Test holes provided on the cover to measure the voltage across the link
- Various options for cable terminations
- Wide range of accessories

**Catalogue numbers structure**

- EBH (see catalogue numbers table)

**Standards/approvals**

- IEC 60947-1 and 3, EN 60947-1 and 3

**Technical data**

- Voltage: 400, 500 and 690 V a.c.
- Current: 160 to 1600 A
- Utilisation category:
  - AC21B Size 4
  - AC22B Sizes 00 (V 120), 1-S, 3, 4
  - AC23B Sizes 00 to 2
  - DC21B Sizes 00, 2 and 3
  - DC21B Sizes 00, 1 and 2

**Compatible fuse links**

- NH 400, 500 and 690 V NH gG and aM fuse links

**Mounting options**

- On mounting plates
  - EBH00 O, EBH1 O, EBH2 O, EBH3 O
- On to busbar systems
  - 60 mm busbar systems: EBH00 1, EBH1 1, EBH2 1 installation on to busbar system with hooked clamps
  - 100 mm busbar systems: EBH2 2, EBH1 2 installation on to busbar system with hooked clamps

**Operating conditions**

- Suitable for installation in environments free of any dust, explosive or aggressive gases
- Altitude up to 2000 metre above sea level
- Can be used in outdoor environments if they are installed in IP34 cabinets
- Relative air humidity should not be higher than 50% temperature of +40°C
- Ambient temperature from -25°C to +55°C

**Packaging**

- 1 per carton

# NH Fuse switch disconnectors - horizontal - EBH00 to EBH4
